

THE OPERATOR MODEL

This direction is **decided** — and it is an **evolution of your craft**, not a replacement of it.
Assembly line → pods: one operator owns a client end-to-end and the engines do production, while a thin tier of specialists sets the ceiling on craft and strategy.

≈12 clients

3 operator pods

2 principals + delivery lead

6 engines

loudface-skills

01 TWO THINGS AT ONCE

read both · together

Most change memos pick one note — drive, or reassure. This one refuses to. Hold both as you read every section below.

This is decided

WE ARE MOVING TO THE OPERATOR MODEL.

Not a proposal up for debate, not an experiment with an exit. The tools already changed the work; the org is catching up to a reality that is here. The question is **how we move**, not whether.

This is evolution

NO ONE IS REPLACED BY A MACHINE.

Your craft becomes the part that matters more, not less. The repetitive production becomes an engine. You move up the stack — from doing every task to **directing the work and owning the outcome**.

02 WHY NOW

the constraint was handoffs, not talent

For years the work crossed five sets of hands because no one person could do all five crafts well. That was the real constraint — not talent, **handoffs**. AI removed it. Production-grade design, build, copy and analysis now sit inside one operator's work.

DEVELOPMENT

ABSORBED

Claude Code + Figma / Webflow turns a design into a built page. The dedicated dev seat is gone.

COPYWRITING

ENGINE + EDITOR

The Content Engine already lets one writer produce the output of ten. Proven, in-house, today.

STRATEGY · PM

JUDGMENT + RITUAL

The analysis becomes a skill; the coordination becomes a rhythm. What is left is the human call.

03 HOW WORK MOVES

one deliverable, two worlds

Targets · directional, not yet measured

HANDOFFS PER DELIVERABLE

~~6~~ 0

CYCLE TIME

~~3-6 wk~~ 2-5 d

HUMANS PER DELIVERABLE

~~5~~ 1.5

04 EVERYONE OPERATES

the capability objection, answered

Every operator is a different specialist underneath — one leads in design, one in content, one in dev, one in AEO strategy. **Same senior floor on everything; a different edge on top.** We don't pretend everyone is equally good at everything — we make sure no one is blocked by what they're not.

“Not everyone can code or design.”
That is the **non-argument.**

The skill carries the **floor** to senior level on day one. Your talent is the **edge** on top. You do not need to be a developer to ship a senior build — you direct one.

THE FLOOR — GUARANTEED

EVERY CRAFT, SENIOR STANDARD, BUILT IN

The skills in **loudface-skills** design, build and write to a senior bar by default. The capability is in the system, not gatekept by a job title.

THE EDGE — YOURS

YOU SET THE CEILING IN YOUR CRAFT

Each of you is still deepest in one thing — design, copy, dev, or AEO strategy. That taste lifts a pod's work from senior to **unmistakable**.

FLOOR + EDGE

Everyone clears the floor.
Each spikes in their craft.

05 SPECIALISTS, COLLABORATING

one brain per client · still a team

One operator owns the client — but no one operates alone. When the content-led operator needs a design crack that Claude won't nail, they **tap the design-led operator**. They solve it together and bank the fix as a skill — so next time the floor is already higher.

The one rule that keeps this from becoming the old relay: **pull someone in to raise your edge or teach you — never to take the task off your plate**. Then write what you learned into **loudface-skills**, and the whole team has it tomorrow.

Competitors add people. We add skills. The gap compounds.

Every tap that becomes a skill is a permanent upgrade to the whole team. That's the flywheel — and it's the moat: rivals add headcount, we add capability.

06

STRUCTURE

flat on delivery · layered on craft

Flat on delivery, layered on craft. One operator brain per client — horizontal, no relay. Above it, a thin tier of specialists sets the ceiling and takes the hardest calls, and **never steps back into the production line**. Seniority here is who sets the standard — not who hands to whom.

Operators differ by home craft — **route each client to the operator whose edge fits** (design-heavy build → the design-led operator). They clear the senior floor on everything via skills and tap each other for the rest. The Strategy Principal also runs a flagship pod.

ENGINE LAYER — SHARED INFRASTRUCTURE, ALL SKILLS LIVE IN LOUDFACE-SKILLS

● CONTENT ENGINE

● DEV ENGINE — Claude Code + Figma / Webflow MCP

● AUDIT ENGINE — DataForSEO

● REPORTING ENGINE — Ahrefs + Peec

● PM ENGINE

● QA ENGINE

Built by the founder. Each pod **stewards** an engine; the Delivery Lead stewards the PM + QA engines. Full-stack on clients, specialist on systems. Client context lives in per-client repos (CLAUDE.md + Notion), **never in heads**.

07

THE DAY, DISTRIBUTED

a normal Tuesday in the pod model

	08:30	09:00–12:00	13:00–14:30	14:30–16:30	16:30–17:30
OPERATOR ×3	Triage Approve PM-Engine digest: overnight client msgs, drafted replies, today's priorities	Production I Content runs · Webflow build via Claude Code · audit kickoff for new client	Client time Weekly calls, Slack threads, expectation-setting — the human layer	Production II + QA Adversarial Claude review pass, fix, submit to design gate	Ship Push live · Reporting Engine sends client update · log friction for retro
ENGINES	PM ENGINE: digests compiled overnight	CONTENT + DEV + AUDIT running in parallel	idle / queued	QA ENGINE: review passes	REPORTING ENGINE: client updates out
DELIVERY LEAD	Pulse Scan all pods — what's on track, what's slipping, who's at risk	Unblock Clear dependencies across pods · manage client timelines & expectations	Client health Check-ins on at-risk accounts before they smoulder	Capacity Balance load across pods · plan next week's client slots	Roll-up What shipped, what's at risk → founder
STRATEGY PRINCIPAL	Scan Skim overnight signals — rankings, AI citations, anomalies	Flagship clients Operates 1–2 hardest accounts directly (player-coach)	Strategy review Reviews pods' strategic calls · unblocks the hard ones	Frontier AEO R&D → codifies into strategy skills	—
DESIGN DIR.	—	Systems Design system + components for newest client (one-time per client)	Gate Review queue: approve / kick back pod outputs	Art direction Brand work, the 30% AI can't do	—
FOUNDER	—	Sales + engines Deals, pricing, engine R&D	Escalations Anything on fire lands here	Engine fixes Patch whatever the morning's friction log surfaced	—

OPERATOR TIME

60% production via engines

25% client comms

15% QA + strategy calls

STRATEGY PRINCIPAL TIME

40% flagship clients

35% strategy review across pods

25% AEO frontier → skills

DELIVERY LEAD TIME

50% pod tracking & unblocking

30% client health

20% capacity & founder roll-up

MON

30-min all-hands: week plan per client. The only standing meeting.

TUE–THU

Production + client time. Engines run, operators ship.

WED

Design gate clear-out — nothing queues past Wednesday.

FRI

Ship + auto-reports + engine retro: what broke feeds the build list.

Decision	Owner	Notes
Scope, pricing, new deals	FOUNDER	Operators never negotiate scope mid-project
Strategy direction, all clients	STRATEGY PRINCIPAL	Sets the line every pod steers to; owns the hardest calls
Strategy call on a client	OPERATOR	Within the Principal's direction; Principal reviews
Delivery health, capacity, timelines	DELIVERY LEAD	Across all pods; first to spot a slipping client
Cross-craft help	OPERATOR PEERS	Tap rule — raise the edge, never take the task
Ship / no-ship	OPERATOR	Only after QA pass + design gate clear
Visual quality	DESIGN DIR.	Hard veto — independent of pod deadlines
Engine changes	STEWARD + FOUNDER	Steward proposes, founder merges
Client escalation / fires	DELIVERY LEAD → FOUNDER	Lead holds the line; founder is the backstop
Tie-breaks	FOUNDER	By definition

09

WHAT THIS MEANS FOR YOU

bigger role, not smaller

The fear with any AI shift is “less of me.” This is the opposite — you trade repetitive production for ownership, leverage, and a craft that compounds.

01

OWN THE WHOLE CLIENT

Not a slice of a deliverable — the relationship and the result. The interesting part of the job, finally undivided.

02

DIRECT, DON'T GRIND

You point senior-grade output where it needs to go. Your judgment is the scarce input, not your keystrokes.

03

BUILD IP, NOT JUST DELIVERABLES

Every skill you add to loudface-skills makes the whole team better — and makes you harder to replace, not easier.

And we get you there — **apprenticeship inside a working pod, war-gaming real client calls, and escalation for the hard 20%.** No one is dropped in the deep end. And for our strongest specialists — strategy, design, delivery — this is a step **up** the stack: your judgment now sets the ceiling on every client, not just the ones you touch.

ROLLOUT — PROVE IT, THEN MOVE

LOUDFACE FZCO • DUBAI
OPS SPEC • V3 • JUN 2026

Don't reorg — **pilot.** Pod 3 (Content Engine) is already running the model. Add 2–3 clients to a second pod for 60–90 days, measure cycle time / margin / client happiness against the relay, then migrate the book in waves once the pod beats the chain.
