

THE OPERATING MODEL · V3

The Operator Model.

How we deliver from here. This direction is **decided** — and it is an **evolution of your craft**, not a replacement of it. Read every page holding both at once.

Two things are true **at the same time.**

Most change memos pick one. This one refuses to. Hold both as you read.

THIS IS DECIDED

We are moving to an operator model.

Not a proposal up for debate, not an experiment with an exit. The tools already changed the work; the org is catching up to a reality that's here. The question is **how we move**, not whether.

THIS IS EVOLUTION

No one is being replaced by a machine.

Your craft becomes the part that matters more, not less. The repetitive production becomes an engine. You move up the stack — from doing every task to **directing the work and owning the outcome.**

The chain we were built on just collapsed.

For years the work moved through five sets of hands because no one person could do all five crafts well. That was the real constraint — not talent, **handoffs**. AI tools removed it. Production-grade design, build, copy and analysis now sit inside the work of one operator.

DEVELOPMENT

Absorbed.

Claude Code + Figma turns a design into a built page. The dedicated dev seat is gone.

COPYWRITING

Engine + editor.

The Content Engine already lets one writer produce the output of ten. Proven, in-house, today.

STRATEGY · PM

Judgment + rhythm.

The analysis becomes a skill; the coordination becomes a ritual. What's left is the human call.

Five people, five handoffs, **one telephone game.**

Every arrow is a place work waits, context leaks, and quality drifts before the client ever sees it.

3–6 wks

TYPICAL CYCLE, BRIEF → LIVE

5 ×

PLACES CONTEXT CAN LEAK

The person who saw the data
never spoke to the client.

TARGET REFERENCE · DIRECTIONAL, NOT YET MEASURED

The pod: one operator, the whole client.

One person owns strategy → content → build → comms for their clients. The engines do the production. Design holds the quality gate. Nothing crosses a seam where it can be lost or watered down.

- 01 **One owner, end to end.** The face on the call is the hand on the work.
- 02 **Engines do production.** Content, build, research — run in parallel, not in sequence.
- 03 **Design gates the ship.** Async review before anything goes out. Quality isn't optional.

“Not everyone can code or design.” That is the **non-argument**.

The skill carries the floor to senior level on day one. Your talent is the edge on top of it.

THE FLOOR — GUARANTEED

Every craft, senior standard, built in.

The skills in **loudface-skills** design, build and write to a senior bar by default.
You don't need to be a developer to ship a senior build — you direct one.
The capability is in the system, not gatekept by a title.

THE EDGE — YOURS

You set the ceiling in your craft.

Each of you is still deepest in one thing — design, copy, dev, or AEO strategy. That taste is what lifts a pod's work from senior to unmistakable. The floor is shared; the edge is you.

FLOOR + EDGE

Everyone clears the floor.
Each spikes in their craft.

We help each other by feeding the library.

Operators still pull each other in — the copy-strong one gets the design-strong one to push a layout further. But the help has one rule, so the old chain can't sneak back:

You pull someone in to **raise your edge or teach you** — never to take the task off your plate. Then you write what you learned into **loudface-skills**, and the whole team gets it tomorrow.

Competitors add people.
We add skills. The gap compounds.

Same functions covered. Fewer seams.

The client still gets every discipline. It just isn't five separate people passing a baton.

FUNCTION	WHO OWNS IT NOW
Strategy & direction	The Operator , with a principal at kickoff & quarterly reviews
Content & copy	Content Engine + operator's editing eye + adversarial QA pass
Design & build	Operator builds via skills; Design Director gates everything shipped
Delivery & comms	The Operator , daily — the face on the call is the hand on the work
Engines & escalation	Founder — builds the systems, catches the hard 20%, sells

These are **roles, not names**. Where each of us lands — and how we get there — is a one-to-one conversation, not a slide.

Your role gets bigger, not smaller.

The fear with any AI shift is “less of me.” This is the opposite. You trade repetitive production for ownership, leverage, and a craft that compounds.

01

Own the whole client.

Not a slice of a deliverable — the relationship and the result. The interesting part of the job, finally undivided.

02

Direct, don't grind.

You point senior-grade output where it needs to go. Your judgment is the scarce input, not your keystrokes.

03

Build IP, not just deliverables.

Every skill you add to the library makes the whole team better — and makes you harder to replace, not easier.

And we get you there — apprenticeship inside a working pod, war-gaming real calls, and escalation for the hard 20%. No one is dropped in the deep end.

We prove it, then we move.

- 01 Pilot. 2—3 clients run pod-style for 60—90 days.
- 02 Measure. Cycle time, margin, and client happiness vs. the old chain.
- 03 Migrate in waves once the pod beats the chain — not before.

This isn't a switch flipped on Monday. It's a move we earn the right to make, with evidence.

WHAT WE ASK OF YOU

Come in **willing to operate** — lean on the skills before deciding you can't.

Feed the library. Every problem you solve, you leave behind for the team.

Bring the wariness — **pressure-test it in the open**, not in the hallway.

TARGETS · DIRECTIONAL

5 → 0 HANDOFFS

weeks → days CYCLE TIME

5 → ~1.5 HUMANS / DELIVERABLE
